

Rasa Pauliukaite Personal Statement

Electroanalytical chemistry has a wide range of applications in everyday life, although it is not yet widely used. In a few decades, we will have smart home appliances, packaging, diagnostic and quality of life monitoring devices. As one of the largest organisations in the field of electrochemical applications, ISE plays an important role in improving the quality of life of people.

I have been involved in ISE since 2004, I was a passive member almost 10 years. I was elected Regional Representative from Lithuania in 2012. In 2020 I was Vice-Chair of the Division 1.

I am very grateful and honoured to have been nominated for the Chair Elected of the Division 1. If I am elected, I will continue and promote the activities of this Division, as I have had great mentors - the previous Chairs. I will continue the exchange of information and dissemination of news both among the ISE and to the public, the organisation of events and the involvement of young people in the Division. I will take key decisions in a collegial, transparent, and open manner, based on ISE values. I will contribute to increasing the number of ISE members wherever possible.
